## What do the lights mean on a car battery charger

Have one of your dashboard warning lights turn on in your Nissan can be frustrating, but if you aren't sure what the dashboard light means or what it's trying to tell you, it can be downright scary. Our team here at Matt Castrucci Nissan never wants you to feel overwhelmed, so we've put together a list of Nissan's most common dashboard lights and what they mean. So before you panic, take a look at the chart below to determine what your dashboard light means! Read more: Learn how to get the most miles out of your Nissan with these 4 simple tips Nissan dashboard lights symbols and meanings One of the best ways to tell if the warning light that illuminates requires immediate attention or not is to look at the color of the warning light. The most serious warning lights will illuminate in red, telling you that your Nissan is in need of some attention from a certified Nissan service center.If the dashboard light that illuminates is yellow or green, the light may mean that a system (such as cruise control or high beams) is on or that there is an issue in the Nissan, though it doesn't necessarily require immediate attention. Take a look below at some of Nissan's most common dashboard warning lights, and remember that indicator lights on your specific Nissan may vary based on model, trim level and equipment. You might also be interested in: How to spring clean your Nissan using household supplies If there's a dashboard warning light illuminated on your Nissan and you aren't sure what it means, feel free to give our team a call at Matt Castrucci Nissan! If one of your dashboard warning lights illuminates and you need to bring it in for an inspection or repair, schedule a service appointment online today or stop right in and see us at our location in Dayton! Has your car ever failed to start on a cold morning? The CCA rating of your car's battery may have been to blame. This measurement determines how easily your car will start when the temperature is at or below freezing.Especially in colder climates, you should keep an eye on the CCA when comparing and choosing a car battery.What Does CCA Stand For?CCA stands for "Cold Cranking Amps". This is a way of rating car batteries based on the power they produce at freezing temperatures. Batteries go through rigorous factory tests in cold temperatures to achieve this rating.The CCA represents the amperage that a battery produces for 30 seconds while maintaining a 7.2 standard voltage. Tests are performed at 0 degrees Fahrenheit or -18 degrees Celsius. Generally, the higher the CCA rating, the better the battery is for your car.How much CCA do we need to start a car?The CCA that a car needs to start depends on the size of the engine. A general recommendation is to choose a battery with one CCA for each cubic inch of engine displacement. This is the lowest CCA rating that the battery for your car would need.For example, if your car's engine displaces 300 cubic inches, you will need a battery with a CCA of above 300. This is doubled if the car uses a diesel engine.It is a good idea to choose a car battery that meets or exceeds the specifications of the original battery. The OE (original equipment) battery is the standard to meet in this situation.The CCA of the OE battery can be found in your car's user manual or the factory sticker. This sticker can be found on the battery in some cases. It may also be positioned under the hood of your car.CCA rate on the car battery sticker.Source: wikimedia.orgShould I compare CCA when choosing a battery?In most cases, comparing CCA is one of the best ways to rate a new car battery. However, it is not the only way to choose a battery. Using the CCA rating alone can lead to multiple issues. Other factors to consider include:Battery group sizeBattery terminal positionAh (Ampere Hour) or RC (Reserve Capacity)Battery lifeAll of these factors can determine if a battery is best for your car.Additionally, most locations do not have subzero temperatures all the time. Since the CCA rating only really applies in colder temperatures, it should not be the only factor you consider. CCA is one of the areas where you can compare batteries, but it should not be the only one.Can a car use a battery with lower CCA?It is generally not recommended to use a battery with a lower CCA than is recommended. Especially in very cold climates, using a lower CCA battery can lead to performance issues. Your car might not always start when you need it to.Consider your devices and accessories as well. Technological advancements require a lot of systems to start when the engine does. For example, interior lights, heated seats, headlights, brake system, and ignition all require starting amps. For this reason, batteries with higher CCA ratings have become increasingly popular (and sometimes required).Technically, a car can use a battery with a lower CCA, but it can damage your engine. Your ignition system may also suffer. In some cases, using a lower CCA battery can lead to starters or ignition coils failing.It can be tempting to purchase a lower CCA battery for the lower weight or because of financial restrictions. Just know that it can lead to damage and that the battery will not last as long. In warmer climates, a lower CCA battery may perform better. However, it will not always start the car in colder temperatures.In short, it is generally not recommended to purchase a battery with a lower CCA than the original equipment. The factory battery should be the standard. It's a good idea to meet or exceed the factory or OE battery CCA rating.Can I put a higher CCA battery in my car?A car battery must only fit the minimum CCA requirements to work well. This means that if you have met or exceeded the CCA of the original battery, there is nothing to worry about.Many would agree that the higher the CCA rating, the better the battery is for your car. This is true, but only in colder climates. In the heat of summer, a higher CCA battery can leak and cause failures in some instances. Keep in mind that this is a possibility when choosing a car battery.Batteries with Higher CCA ratings also tend to be larger. They will still work in your car but may not fit in the battery tray.Overall, a higher CCA battery can be more reliable and last longer. CCA decreases over time due to charge loss and other factors. Choosing a higher CCA battery can mean you have to replace it less often. It also means that your car will start reliably in colder temperatures.Find purchasing options for High CCA Starter Batteries online:When Should I Replace The Car Battery According To Its CCA Value?The CCA value of your battery must stay above the OE or factory CCA recommendation.If you have your battery tested and the CCA value is lower than the recommended rating, the battery may need to be replaced. The ambient air temperature when the battery is tested must also be considered. If it is above freezing when the battery is tested, the CCA value should be closer to the original rating.However, if the CCA value is much lower even if warmer temperatures, it is time to replace the battery. How often you need to replace it depends on the CCA requirement for your car. A higher CCA battery will also need to be replaced less often.Generally, a battery needs to be replaced when it is putting out less than 50% of its CCA rating.The Final ThoughtsThe CCA rating, or Cold Cranking Amp rating, can make starting your car in freezing temperatures that much easier. Comparing CCA can help you choose a car battery, but it should not be the only factor that you consider. Car battery size and choosing the correct battery for your make and model of vehicle is important - pick the wrong one, then no matter your cars specification, or how well it is maintained, it simply will not perform as it should or could. Your car battery powers the spark that ignites the fuel that gets you started. It also helps give power to your lights, indicators, navigational system, dash-cams, windscreen wipers and electric windows, along with many other on-board electrical features. Car batteries have an average life span of between three to five years, providing it's the correct battery size for your vehicle; fitting the wrong size can mean unreliability and frequent breakdowns. There are various factors that need to be considered when choosing your new battery. Along with the battery size you must also pay attention to: The location of the terminals The type of the terminal (standard post, Japanese post, side terminal, or square bolt-through) The number of cells The voltage The cold cranking amperage (CCA) The Amp/hour rating Choosing the wrong size battery can be dangerous and damage your vehicle. Therefore, it is important to seek advice from an expert if you are unsure or need more information. Just because a battery fits conveniently into the vehicles battery holding tray does not mean it's the right one. Battery group sizes are numbers and letters that have been assigned to the battery to represent the "group size" that the battery belongs to. This designation code includes the make, model, and engine type of the vehicle that the battery can be fitted to. Car batteries should fit snugly in their holding tray to prevent being thrown around whilst the vehicle is in motion. The RAC battery finder and fitting service can help you find the correct size battery for your car in seconds, have it delivered, and even fit it in a time frame and location of your choice with just a few clicks of a button, it couldn't be easier. As with most things, it's always worth shopping around to make sure you're getting the best product, at the best price. Choosing the right battery for your car will help ensure your car performs as it should as well as minimise the risk of costly breakdowns. We constantly price match our batteries but from time to time you may find a like for like battery at a lower price. If this is the case please let us know as we will do our very best to beat that price. Whichever battery you have, make sure you use the right charger. Choose the correct charger for your battery by clicking on the link, or if you would prefer to speak with one of our advisors regarding the appropriate battery or charger for your vehicle, then give us a call on 0800 8620676. We are here to help.
